DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 5-12, 14, 15, 17-19, and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Heffner (EU-0439127).

Regarding claims 1, 2, 10, 11, 14, 15 and 17, Heffner (of record) discloses a fast optical polarization meter in which the polarizer 7 and 6 are considered as retarders and the optical parameter is determined on the basis of the detected intensities. See figure

1. Regarding claim 3, see abstract of Heffner for measuring state of polarization.

Regarding claims 5 and 9, see figure 1 of Heffner for beam splitting element (2).

Regarding claims 6-7, see page 5 lines 3-20 of Heffner for inverting the matrix.

Regarding claims 8 and 12, see figure 1 of Heffner for detecting four parts of the beam.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heffner .

Regarding claim 4, it would have been obvious to one having ordinary skill in the art at the time the invention was made to detect the wavelength if a wavelength sensor is used.

Regarding claim 16, it would have been obvious to replace the beam splitter of Heffner by a first and second beam splitters because they would function in the same manner.

Allowable Subject Matter

5. Claim 13 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Chou et al (US2003/0086144), Ruchet et al (US2003/0075676), Johs et al (6,118,537), Spillman Jr. Et al (4,904,085) and Nakamoto (5,545,980).
